

CARBO™
MEDALIST®

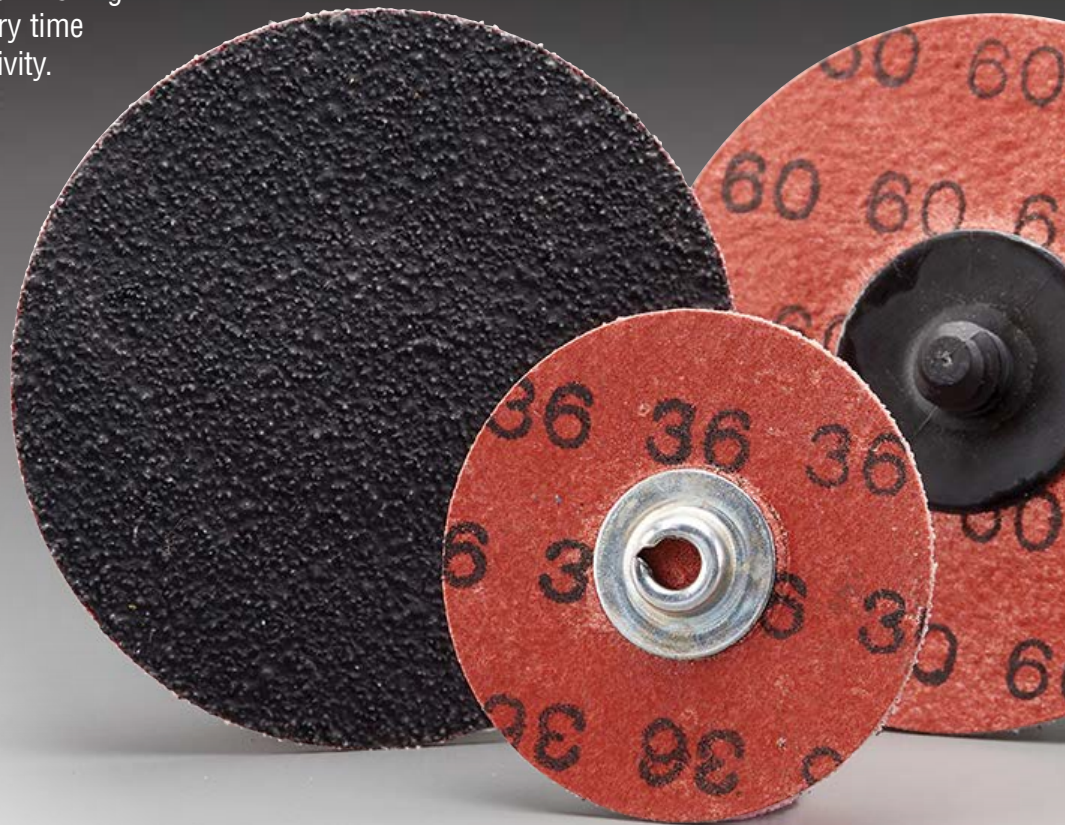

***EASY ON YOU, YOUR PART QUALITY
AND YOUR BOTTOM LINE***

When it comes to operator comfort and productivity, and profitability, every purchase has to be strategic to the bottom line. Choose Carbo Medalist quick-change discs and spend your day doing what you do best – grinding and finishing critical workpieces to within spec, every time – with less effort, and greater productivity.

Key Materials/Markets:

Mild Carbon Steel,
Ferrous Metals, and Cast Iron

MRO, Metal Fabrication,
and Welding

**Where Productivity Meets
Operator Comfort and Safety**

- Achieve an exceptionally fast cut rate and long product life from our super sharp ceramic grain that defies premature dulling with optimum resistance to wear
- Eliminate burn (with our grinding aid lubricant) and produce excellent part finishes that competitive blocky grains cannot deliver
- Gain life and performance from our new, stronger, thicker 2-ply, Y-weight Plus polyester backing; discs don't split, or rip, and show less edge wear
- No more changing over slow-grinding, fast-wearing discs; simply get to the task at hand so your production times turn into profit lines
- Get the same quality results on mild carbon steel, ferrous metals and cast iron applications that you expect, with less pressure – as a result of enhanced grain/bond adhesion, and more forgiving, cooler cut that operators prefer
- Choose these environmentally-stable discs with the lowest formaldehydes and no performance-inhibiting dies that are safer for your operators' use
- At the end of the day, the finish has to be consistent and meet the quality expectations of your customers. It's a win-win with Carbo Medalist YP 2788 R quick-change discs. You get a product that works under the toughest conditions and ensures quality from start to finish without gouging or leaving cutting patterns.
